Communication

Global Olympic Sports Performance Analysis

Project Detail	Value
Date	2 November 2026
Team ID	_____
Project Name	Global Olympic Sports Performance Analysis
Maximum Marks	1 Mark (as shown in supplied template)

Communication Plan

The team will coordinate Tableau analysis, dashboard development, data validation and Flask embedding through the following proposed plan. Replace channels if your team uses different tools.

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Team Standup	Daily	WhatsApp / in-person	All team members	Share progress, today's tasks and blockers.
2	Progress Update	Weekly	Google Meet / WhatsApp	All team members	Review charts, dashboards, data preparation and pending work.
3	Issue / Bug Discussion	As needed	WhatsApp group / call	Relevant members	Resolve calculation, filter, data-join and Flask issues.
4	Stakeholder Review	Bi-weekly	Google Meet / classroom	Team and project guide	Collect feedback on dashboard clarity, accuracy and scope.
5	Final Demo Rehearsal	Once before demo	In-person / Google Meet	All presenters	Check timing, filters, Tableau Story and web integration.
6	Task Tracking	Weekly	Shared Google Sheet	All team members	Track owner, status, deadline and dependencies.

Communication Challenges & Resolutions

S.No	Challenge Faced	Resolution / Action Taken
1	Different understanding of chart calculations and medal counting.	Agree on definitions first; validate COUNTD medal keys against sample records.
2	Investment and region fields are missing from athlete_events.csv.	Use verified supplementary data only; document gaps and never invent investment values.
3	Dashboard or Flask integration problems during preparation.	Test each dashboard separately; keep a backup Tableau link and rehearse the embed page.

Team Involvement in Demonstration

Global Olympic Sports Performance Analysis

Project Detail	Value
Date	2 November 2026
Team ID	_____
Project Name	Global Olympic Sports Performance Analysis
Maximum Marks	1 Mark (as shown in supplied template)

The template has six member rows but no names. The Member 1–6 assignments below are editable role placeholders, not actual team identities. Replace them and match the real presenters.

S.No	Team Member Name	Role in Demo	Section Presented	Contribution Summary	Participation
1	Member 1: _____	Team lead / presenter	Introduction, problem and objectives	Explains project purpose and scope.	Active
2	Member 2: _____	Data analyst	Dataset, cleaning and limitations	Explains 271,116 records and 1896–2016 coverage.	Active
3	Member 3: _____	Tableau developer	Visualizations 1–3; Dashboard 1	Demonstrates country, sport and athlete metrics.	Active
4	Member 4: _____	Tableau developer	Visualizations 4–6; Dashboard 2	Explains efficiency and supplementary data dependencies.	Active
5	Member 5: _____	Visualization presenter	Visualizations 7–9; Dashboard 3; Story	Explains trends, host nations and regional distribution.	Active
6	Member 6: _____	Integration / QA presenter	Flask, testing and conclusion	Shows embedded dashboards and summarizes future work.	Active

Team Coordination Notes

Aspect	Details
Team Leader / Coordinator	Member 1: _____ (replace with actual coordinator)
Overall Team Coordination Rating (1–5)	_____ / 5 (enter actual rating after demo)
Any issues during demo	Possible issue: slow loading, filter mismatch, internet or Tableau Public access.
How issues were resolved	Use a saved workbook / screenshots as backup; refresh the published link and continue with the prepared sequence.

Demonstration of Proposed Features

Global Olympic Sports Performance Analysis

Project Detail	Value
Date	2 November 2026
Team ID	_____
Project Name	Global Olympic Sports Performance Analysis
Maximum Marks	1 Mark (as shown in supplied template)

Feature status is marked Planned / verify because actual implementation state has not been confirmed. Update statuses and Yes/No only after testing the working project.

S.No	Feature Name	Description	Status	Demonstrated	Remarks
1	Olympic Dataset Analysis	Load athlete_events.csv (271,116 rows; 1896–2016).	Planned / verify	To confirm	Source file ends in 2016, not 2026.
2	Calculated Fields	Create medal count, unique medal key, medal efficiency and medals-per-athlete calculations.	Planned / verify	To confirm	Validate team-event deduplication and aggregation.
3	Dashboard 1: National Performance	Show medals per athlete by sport, top countries and medal distribution by sport.	Planned / verify	To confirm	Three visualizations.
4	Dashboard 2: Investment & Regional Efficiency	Compare investment and medal outcomes; show regional / country efficiency.	Data-dependent	To confirm	Needs verified investment and region data.
5	Dashboard 3 & Tableau Story	Show medal trends, host comparison, regional distribution and four story points.	Planned / verify	To confirm	Host NOC and region lookup tables required.
6	Flask Web Integration	Embed published Tableau dashboards in a Flask website with navigation.	Planned / verify	To confirm	Requires published URL and tested embed.

Feature Implementation Summary

Measure	Value
Total Features Proposed	6
Total Features Implemented	Update after implementation verification
Total Features Demonstrated	Update after live demonstration
Overall Implementation Rate (%)	Implemented features ÷ 6 × 100

Project Demo Planning

Global Olympic Sports Performance Analysis

Project Detail	Value
Date	2 November 2026
Team ID	_____
Project Name	Global Olympic Sports Performance Analysis
Maximum Marks	1 Mark (as shown in supplied template)

Suggested total duration: approximately 10 minutes. Replace Member placeholders with actual presenters.

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction & Problem Statement	Explain the Olympic analysis objective and three stakeholder scenarios.	1.0	Member 1: _____
2	Dataset & Preparation	Show source fields, record count, year coverage, limitations and medal logic.	1.5	Member 2: _____
3	Dashboard 1: National Performance	Demonstrate top countries, sport contribution and medals-per-athlete view.	2.0	Member 3: _____
4	Dashboard 2: Investment & Regional Efficiency	Explain investment comparison and regional analysis; identify missing supplementary data.	2.0	Member 4: _____
5	Dashboard 3, Tableau Story & Flask	Show trends, host comparison, regional distribution, story and Flask embed.	2.5	Members 5 / 6: _____
6	Results, Limitations & Q&A	Summarize findings, answer questions and explain future data additions.	1.0	Member 1: _____

Demo Flow Summary

Step	Activity	Notes
1	Introduction & Problem Statement	State the project goal and the three analysis scenarios.
2	Solution Overview	Explain dataset, calculations, dashboards and supplementary lookup data.
3	Live Feature Demonstration	Use dashboard filters, select marks, navigate Tableau Story and open Flask page.
4	Q&A Session	Be transparent that the CSV ends in 2016 and lacks investment / region fields.

Scalability & Future Plan

Global Olympic Sports Performance Analysis

Project Detail	Value
Date	2 November 2026
Team ID	_____
Project Name	Global Olympic Sports Performance Analysis
Maximum Marks	1 Mark (as shown in supplied template)

The current project scope uses athlete_events.csv, described as 271,116 records, 15 columns and Olympic data through 2016. The limitations and upgrades below follow that scope.

Current System Limitations

S.No	Limitation	Impact	Priority
1	Dataset coverage stops at 2016.	Cannot report 2020, 2024 or 2026 results from this file.	High
2	No sports investment or region columns.	Investment-versus-medal and regional analysis require verified supplementary data.	High
3	No dedicated host-country field.	Host-nation comparison requires year / season / host-NOC lookup data.	Medium

Scalability Plan

S.No	Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Classroom / single-user Tableau analysis.	Publish to Tableau Server / Cloud for multiple users; configure permissions.
2	Data Storage	CSV dataset and supplementary lookup tables.	Move to a structured database or governed warehouse as data volume grows.
3	Performance	Tableau worksheets use distinct medal keys and interactive filters.	Use cleaned extracts, reduce unnecessary marks, optimize relationships and test load times.
4	Security	Access depends on Tableau publishing choice.	Do not expose private data publicly; use authenticated hosting and protect Flask credentials.

Future Roadmap

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Complete and validate 9 visualizations, 3 dashboards and 4-point Tableau Story.	Current phase	Working historical analysis and presentation-ready dashboards.
Phase 2	Add verified region mapping and host-NOC lookup tables.	Next phase	Enable regional and host-country comparisons.
Phase 3	Add reliable sports investment data and newer Olympic editions.	Future data update	Enable investment analysis and extend historical coverage.
Phase 4	Optimize Tableau performance and complete Flask embedding / deployment.	Final enhancement	Improve accessibility, maintainability and demo experience.

Submission note: Replace blank team details and Member 1–6 placeholders. Confirm actual implementation and demonstration status before marking features Implemented or Yes. Investment, region, host-country and post-2016 claims must be supported by real data.
