PROBLEM?SOLUTION FIT
Global Olympic Sports Performance Analysis Using Tableau
Prepared by: Aradhana Nagar

1. CUSTOMER SEGMENTS
National Olympic Committee strategists; sports investment analysts; Olympic journalists and data storytellers; researchers and policy makers.

2. JOBS-TO-BE-DONE / PROBLEMS
Compare medal performance across countries and sports; understand athlete participation and medal trends; evaluate host-nation performance; examine regional patterns; and relate investment to medal outcomes when verified investment data is available.

3. TRIGGERS
Olympic planning cycles, grant allocation, new results, sports policy reviews, and media reporting deadlines.

4. EMOTIONS: BEFORE / AFTER
Before: users may feel overwhelmed by large and fragmented datasets. After: interactive dashboards are intended to provide clearer comparisons and faster exploration.

5. AVAILABLE SOLUTIONS
Spreadsheets, static reports, official results tables, and manually created presentations.

6. CUSTOMER CONSTRAINTS
Inconsistent source definitions, missing supplementary data, limited technical access, and the current athlete_events.csv coverage ending in 2016.

7. BEHAVIOUR
Users search results, compare countries and sports, filter years and seasons, and prepare reports or presentations.

8. CHANNELS OF BEHAVIOUR
Online: Tableau dashboards, official data portals, downloadable CSVs, and a Flask-hosted interface.
Offline: committee meetings, funding reviews, sports policy discussions, and project demonstrations.

9. PROBLEM ROOT CAUSE
Olympic records are distributed across multiple dimensions and require cleaning, metric definitions, and visual analysis before they can support decisions.

10. YOUR SOLUTION
Nine Tableau visualizations across three dashboards, a four-scene story, calculated fields, interactive filters, and optional Flask embedding. Investment, region, and host-nation analysis require verified supplementary lookup data.

PROBLEM?SOLUTION FIT
Dashboard 1 supports national performance strategy; Dashboard 2 supports investment and regional analysis when extra data is supplied; Dashboard 3 supports historical trends and host-nation storytelling.

DATA LIMITATION
Uploaded athlete_events.csv has 271,116 rows and 15 columns, with coverage from 1896 to 2016. It does not include investment or region fields and cannot support 2020?2026 claims.
